HUBUNGAN PERAN PETUGAS KESEHATAN DENGAN KECEMASAN PADA PASIEN TUBERKULOSIS PARU YANG MENJALANI PENGOBATAN DI PUSKESMAS WONOTUNGGAL

Xiii+93 Hal+6 Tabel +1 Gambar + 10 Lampiran

Latar Belakang Tuberkulosis paru (TB paru) adalah penyakit menular dengan angka kejadian tinggi di Indonesia. Proses pengobatan yang panjang sering menimbulkan kecemasan pada pasien akibat beban penyakit, stigma sosial, dan ketidakpastian kesembuhan. Petugas kesehatan berperan penting dalam memberikan informasi, dukungan emosional, dan edukasi yang dapat membantu mengurangi kecemasan, meningkatkan motivasi, serta mendorong kepatuhan pasien selama pengobatan.

Tujuan : Mengetahui Hubungan Peran Petugas Kesehatan Dengan Kecemasan Pada Pasien Tuberkulosis Paru Yang Menjalani Pengobatan Di Puskesmas Wonotunggal

Metode : Jenis penelitian yang digunakan adalah penelitian kuantitatif dengan metode penelitian korelasi. sampel dalam penelitian ini 40 orang. metode *Total sampling* analisis korelasi Rank Spearman Penelitian dilakukan di Puskesmas Wonotunggal

Hasil : Terdapat Hubungan Peran Petugas Kesehatan Dengan Kecemasan Pada Pasien Tuberkulosis Paru Yang Menjalani Pengobatan Di Puskesmas Wonotunggal ($p\text{-value} = 0,029 (< 0,05)$). nilai koefisien Spearman Rank sebesar 0,346 menunjukkan bahwa kekuatan hubungan tersebut tergolong lemah

Kesimpulan : terdapat Hubungan Peran Petugas Kesehatan Dengan Kecemasan Pada Pasien Tuberkulosis Paru Yang Menjalani Pengobatan Di Puskesmas Wonotunggal

Kata Kunci : Petugas Kesehatan. Kecemasan, Tuberkulosis Paru

RELATIONSHIP BETWEEN THE ROLE OF HEALTH WORKERS AND ANXIETY IN PULMONARY TUBERCULOSIS PATIENTS UNDERGOING TREATMENT AT WONOTUNGGAL COMMUNITY HEALTH CENTER

Xiii+93 Pages+6 Tables +1 Figure + 10 Attachments

Background Pulmonary tuberculosis (pulmonary TB) is an infectious disease with a high incidence in Indonesia. The long treatment process often causes anxiety in patients due to the burden of the disease, social stigma, and uncertainty of recovery. Health workers play an important role in providing information, emotional support, and education that can help reduce anxiety, increase motivation, and encourage patient compliance during treatment.

Objective: To determine the relationship between the role of health workers and anxiety in pulmonary tuberculosis patients undergoing treatment at Wonotunggal Community Health Center

Method: The type of research used is quantitative research with a correlation research method. The sample in this study was 40 people. Total sampling method Spearman Rank correlation analysis The study was conducted at the Wonotunggal Health Center.

Results: There is a Relationship Between the Role of Health Workers and Anxiety in Pulmonary Tuberculosis Patients Undergoing Treatment at the Wonotunggal Health Center ($p\text{-value} = 0.029 (<0.05)$). The Spearman Rank coefficient value of 0.346 indicates that the strength of the relationship is relatively weak

Conclusion: There is a Relationship Between the Role of Health Workers and Anxiety in Pulmonary Tuberculosis Patients Undergoing Treatment at the Wonotunggal Health Center

Keywords: Health Workers. Anxiety, Pulmonary Tuberculosis
